

From site visit to report. From enquiry to payment.

Service reports, AMC scheduling and job follow-up for water treatment companies, in one connected system with a phone app for your engineers.

Sound familiar?

Reports on paper or Word

The engineer writes readings on site, someone types them in again that evening.

Limits checked by eye

A reading outside the limit is noticed late, or not at all.

Jobs and payments in memory

Nobody is sure which visits are due or which jobs are unpaid.

How AquaLoop works

1

Engineer, on the phone

Fills the service report on site. A value outside its limit turns red as it is typed.

2

Coordinator reviews

Sees the red readings first, then marks the report reviewed or sends it back.

3

PDF in your layout

Your logo, your format, ready for the client. Red values stay inside your team.

4

Follow-up

Another visit goes on the planner in one click. Jobs are followed until they are paid.

Report SR-2026-0003

[To review](#) [Visit](#) [2 values out of limit](#) [Visit again: to schedule](#)

Next: Check the 2 red readings, then mark it as reviewed or send it back.

Needs your attention

- pH (Generator room FCU): 10.80 limit 8 - 10.5
- Total Iron (Office building FCU): 1.20 ppm limit <1

Sample locations one column for each place you took a reading

Fire pump room F x Office building FC x Generator room F x + Add location

PARAMETER	UNIT	LIMIT	FIRE PUMP ROOM FCU	OFFICE BUILDING FCU	GENERATOR ROOM FCU
pH		8 - 10.5	9.58	9.54	10.80
Conductivity	µS/cm	<3000	2318	2321	2321
Total Dissolved Solids	ppm	<2000	1704	1707	1706
Suspended Solids	ppm	<10	3	2	4
Total Iron	ppm	<1	0.48	1.20	0.52
Total Hardness	ppm	<100	70	80	70

The coordinator's review: readings outside their limits are listed first.

System details
e.g. Chiller plant, 2 loops

Circuit name
e.g. Chilled water

Report type
AMC Service Report

Sample locations one column for each place you took a reading

Results + Add location

The engineer's report on the phone.

What is in the system

Service reports

Your own report types, readings, units and limits. Site photos and signatures are coming next, and we can build them for you.

AMC scheduling

A whole contract's visits on the planner in one click, with weekends moved to Monday.

Engineer phone app

No app store. Sign in with employee ID and PIN. Each engineer sees only his own jobs.

GPS attendance

Check-in and check-out times, distance from the site and time on site, for every visit.

Lab samples

Tests per site and day, collected on the phone, and a clean table to send to the lab.

Leave and requests

Engineers ask for leave, permission or an advance. The coordinator approves in one click.

Dispatch and month view

Tomorrow's schedule as a table for your WhatsApp group, and the whole team's month in one grid.

Quotations and cost sheet

Cost each job line by line and see your margin before you send. The cost sheet stays private, the client sees only the quotation.

Follow to payment

Work done, GRN, invoice and payment, with how many days each job has waited.

Works with your accounts. AquaLoop does not issue invoices: invoices stay in your approved accounting software. We connect to Zoho Books today, and a connection to Tally has been tested.

Try it with a one-month pilot

1

Send a report

Send us one of your current report formats.

2

See it in 48 hours

We show it working in AquaLoop, on a phone.

3

Pilot

A few engineers and a few sites for one month.

4

Decide

We agree the measures first, and you decide on what you see.

Send us your report format.

See it working in AquaLoop within 48 hours, free. Or watch the 11-minute walkthrough and try the live demo on our website.
